The invention relates to antisense inhibitors of genes essential to prokaryotic cellular proliferation, their use in identifying the genes, their use in the discovery of novel antibiotics, the essential genes themselves and the encoded proteins. The prokaryotes used are Bscherichia coli, Staphylococcus aureus, Salmonella typhi, Klebsiella pneumoniae, Pseudomonas aeruginosa and Enterococcus faecalis. The invention is also

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               720
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           780
           encodes a phospho-N-acetylmuramyl-pentapeptide translocase designated Mray. The Mray protein is involved in bacterial cell wall biosynthesis. It catalyses the first step of the membrane cycle of peptidogylycan biosynthesis, i.e., the transfer of an N-acetylmuramic acid peptide to a bactoprenol phosphate carrier molecule. The Mray protein is useful in in vitro assays to screen for antibacterial compounds that target cell wall biosynthesis. Inhibitors of the Mray protein are useful in preventing the growth of Pseudomonas and other G+C rich bacteria. Pseudomonas acruginosa is an opportunistic pathogen which causes infections in patients with burns, neutropenia, or cystic fibrosis. Primers or probes derived from the mray gene are useful in nucleic acid amplification-based assays for detecting the presence of a polynucleotide encoding
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          300

  useful for the identification of potential new targets for antibiotic development. The antisense nucleic acids can also be used to identify proteins used in proliferation, to express these proteins, and to obtain antibodies capable of binding to the expressed proteins. The proteins can be used to screen compounds in rational drug discovery programmes. The autisense nucleic acid sequence is also useful to screen for homologous nucleic acids which are required for cell proliferation in a wide variety of organisms. The present sequence encodes an essential prokaryotic cellular proliferation protein. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     99
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  720
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                840

1020 CGCTTCTGGATCATCACCGTGATCCTGGTGCTGATCGGCCTCGCCACCTTGAAGCTGCGT 1080 Aresceccearccarcaccarrrceaacreaacseaccecceccecceccecceccecce 1020 The invention relates to an isolated nucleic acid comprising any one of the 6213 antisense sequences given in the specification where expression of the nucleic acid inhibits proliferation of a cell. Also included are: (1) a vector comprising a promoter operably linked to the nucleic acid encoding a polypeptide whose expression is inhibited by the antisense nucleic acid; (2) a host cell containing the vector; (3) an isolated polypeptide or its fragment whose expression is inhibited by the antisense antisense nucleic acid; (4) an antibody capable of specifically binding the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular 1021 CGCTTCTGGATCATCACCGTGATCCTGGTGCTGATCGGCCTCGCCACCTTGAAGCTGCGT ccentraticatececcasearcerectericatearcateceterreserreserreserates Accercrossigarearceassicscrirerreaascrossicscocscrirerra <u> accerercegranareaceagerceerreerreageraaceagacecececerrrecer</u> Zyskind JW; Xu HH; New antisense nucleic acids, useful for identifying proteins or s for homologous nucleic acids required for cellular proliferation isolate candidate molecules for rational drug discovery programs. prokaryotic essential gene; cell proliferation; Α̈́Ę Ohlsen Forsyth Haselbeck R, Yamamoto R,

                                                                                                                                                                                                                                                                                                                                                                     8
                                                                                                                                                                                                                                                                                                                                                                                                  g
                                                                                                                                                                                                                                                                                                                                                                                                                                  8 6
proliferation or the activity of a gene in an operon required for proliferation, (7) identifying a compound that influences the activity of the gene product or that has an activity against a bloogical pathway required for proliferation, or that inhibits cellular proliferation; (8) identifying a gene required for cellular proliferation or the biological pathway in which a proliferation-required gene or its gene product lies or a gene on which the test compound that inhibits proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a compound's activity, (11) a culture comprising strains in which the gene product is overexpressed or underexpressed; (12) determining the extent to which each of the strains is present in a culture or collection of strains; or (13) identifying the target of a compound that inhibits the proliferation of an organism. The antisense nucleic acids required for proliferation to isolate candidate molecules for rational for cellular proliferation in cells other than S. aureus, S. typhimurium, K. pneumoniae or P. aeruginosa. The present sequence is one of the target proliferation in cells other than S. aureus, S. typhimurium, CC prokaryctic essential genes. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in cellety swipo.int/pub/published_pot_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     009

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        à
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        엄
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ò
                        The invention relates to an isolated nucleic acid comprising any one of the 6213 antisense sequences given in the specification where expression of the nucleic acid inhibits proliferation of a cell. Also included are:

(1) a vector comprising a promoter operably linked to the nucleic acid encoding a polypeptide whose expression is inhibited by the antisense nucleic acid; (2) a host cell containing the vector; (3) an isolated or polypeptide or its fragment whose expression is inhibited by the antisense nucleic acid; (4) an antibody capable of specifically binding the polypeptide; (6) inhibiting cellular proliferation or the activity of a gene in an operon required for proliferation or the activity of a gene in an operon required for the gene product or that has an activity adminst a blological pathway or required for proliferation, or that has an activity adminst a blological pathway or required for proliferation, or that inhibits cellular proliferation of identifying a gene required for cellular proliferation or the biological corpusion which the test compound that inhibits proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a compound of an organism of the strains is present in a culture or collection of the which each of the strains is present in a culture or collection of the proliferation of an organism. The antisense nucleic acids are undersectived confidential proliferation of an organism. The antisense nucleic acids are useful for an organism or for candidate moleciles for actional and any acceptance or and acids are useful for any and any acceptance or and acids are useful and any acceptance or and acids are useful and any acceptance or and acids are useful and any acceptance or and acids are useful and any acceptance or and acids are useful and any acceptance or and acids are useful and any acceptance or and acids are useful and any acceptance or and acids are useful and any acceptance or and acids and acids and acceptance or acids and acceptance or acids and acceptance o
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      drug discovery programs, or for screening homologous nucleic acids required for proliferation in cells other than S. aureus, S. typhimurium, K. preumoniae or P. aeruginosa. The present sequence is one of the target prokaryotic essential genes. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at the wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          TACCTGACCCTGCGCGCATTCTCAGCGTGCTCACCGCGCTGTCGCTGTCGCTGTGGCTG 120

```
the first antisense sequences given in the specification where expression of the nucleic acid inhibits proliferation of a cell. Also included are:

(1) a vector comprising a promoter operably linked to the nucleic acid encoding a polypeptide whose expression is inhibited by the antisense nucleic acid; (2) a host cell containing the vector; (3) an isolated polypeptide or its fragment whose expression is inhibited by the antisense nucleic acid; (4) an antibody capable of specifically binding the polypeptide; (5) producing the polypeptide; (6) inhibitied by the antisense nucleic acid; (4) an antibody capable of specifically binding the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular proliferation or the activity of a gene in an operon required for compliced for proliferation, or that has an activity against a biological pathway or proliferation or that has an activity against a biological pathway or equired for proliferation, or that inhibits proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a compound's activity; (11) a culture comprising strains in which the gene product is overexpressed or underexpressed; (12) determining the extent to proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a compound's activity; (11) a culture comprising strains in which the gene product is overexpressed or underexpressed; (12) determining the extent to which each of the strains is present in a culture or collection of strains; or (13) identifying the target of a compound that inhibits proceed or proliferation of an organism. The antisense nucleic acids required for proliferation in calls other than S. aureus, S. typhimurium, K. pneumoniae or P. aeruginosa. The present sequence is one of the target of prokaryotic essential genes. Note: The sequence data for this patent did corporated form part of the printed specification, but was obtained in cellectronic format directly from WIPO at the printed potential processed or sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    360
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         120

New antisense mucleic acids required for cellular proliferation to isolate candidate molecules for rational drug discovery programs.

Tor homologous mucleic acids required for cellular proliferation to isolate candidate molecules for rational drug discovery programs.

Tor homologous mucleic acids required for cellular proliferation to isolate candidate molecules for rational drug discovery programs.

Tor homologous mucleic acid representation of a cell. Also included are: Ct the molecic acid inhibite sproliferation of cell. Also included are: Ct the molecic acid inhibite promoter operably linked to the mucleic acid mucleic acid inhibite promoter operably linked to the mucleic acid mucleic acid inhibite promoter operably linked to the mucleic acid mucleic acid; (3) a host cell consalming the vector; (3) an isolated polypeptide or its fragmant whose expression is inhibited by the antisense mucleic acid; (5) prodicing the polypeptide; (6) inhibiting cellular proliferation or the activity of a gene in an operan required for proliferation or that activity of the gene product or that has an activity against a biological pathway in which a proliferation, or that inhibits cellular proliferation of an organism acces; (3) manufacturing an antiboric; (10) proliferation of an organism acces; (3) manufacturing an antiboric; (10) proliferation of an organism. The antiboric; (10) proliferation of the strains in which each of the strains is present in a culture compound that inhibits proliferation of an organism. The antiboric; (10) proliferation of an organism acces; (3) determining the except of a compound that inhibits for compound a cultity, (11) a culture comprising strains; or consensing for homologous mucleic acids are useful for which each of the strains is present in a culture organism acces; (3) determining the p

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    à
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to antisense inhibitors of genes essential to prokaryctic cellular proliferation, their use in identifying the genes, their use in the discovery of novel antibiotics, the essential genes themselves and the encoded proteins. The prokaryctes used are Eschericia coli, Staphylococcus aureus, Salmonella typhi, Klebsiella pneumonlas, pseudomonas ascraginosa and Enterococcus feccalis. The invention is also useful for the identification of potential new targets for antibiotic development. The antisense nucleic acids can also be used to identify proteins used in proliferation, to express these proteins. The proteins on the expressed proteins. The proteins can be used to screen compounds in rational drug discovery programmes. The nucleic acids which are required for cell proliferation in a wide variety of organisms. The present sequence encodes an essential prokaryctic cellular proliferation protein. Note: The sequence data for this patent cid not form part of the printed specification, but was obtained in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      420
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        420

```
The invention relates to an isolated nucleic acid comprising any one of the 6213 antisense sequences given in the specification where expression of the nucleic acid inhibite proliferation of a cell. Also included are:

of the nucleic acid, inhibite proliferation of a cell. Also included are:

concoling a polypeptide whose expression is inhibited by the antisense nucleic acid, (1) a nost call containing the vector; (1) an isolated polypeptide or its fragment whose expression is inhibited by the antisense nucleic acid, (4) an antibody capable of specifically binding cholypeptide or the fragment whose expression is inhibited by the artisense nucleic acid, (4) an antibody capable of specifically binding the polypeptide of the activity of agene in an operon required for proliferation, (7) identifying a compound that inhibites activity of the gene product or that has an activity against a biological pathway in which a proliferation-required gene or its gene product lies car agene on which the test compound that inhibits proliferation of an organism acts, (9) manufacturing an antibiocic, (10) profiling a compound's activity, (11) a culture comprising strains in which the series or underexpressed, (12) determining the extent to which each of the strains is present in a culture or collection of strains, or (13) identifying the target of a compound that inhibits the proliferation of an organism. The antisense nucleic acids are useful for identifying proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational
                                                                                                                                                                                                                                                                      New antisense nucleic acids, useful for identifying proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational drug discovery programs.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   drug discovery programs, or for screening homologous nucleic acids required for proliferation in cells other than S. aureus, S. typhimurium, K. preumoniae or P. aeruginosa. The present sequence is one of the target prokaryotic essential genes. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at the wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                     SEQ ID NO 23402; 1766pp; English

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to an isolated mucleic acid comprising any one of the 6213 antisense sequences given in the specification where expression of the mucleic acid inhibite proliferation of a cell. Also included are:

(1) a vector comprising a promoter operably linked to the nucleic acid conding a polypeptide whose expression is inhibited by the antisense nucleic acid; (2) an bost cell containing the vector; (3) an isolated considered to the fragment whose expression is inhibited by the antisense nucleic acid; (4) an antibody capable of specifically binding the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular consideration or the activity of a gene in an operon required for proliferation or that has an activity against a biological phemby or required for proliferation, or that inhibits cellular proliferation; (8) identifying a compound that influences the activity of required for proliferation, or that inhibits cellular proliferation; (8) identifying a gene required for cellular proliferation or the biological perhway in which a proliferation-required gene or its gene product lies or a gene on which the test compound that inhibits proliferation of an organism acts; (9) manufacturing an antibiocis; (10) profiling a compound's activity; (11) a culture comprising strains in which the gene or proliferation of an organism. The antisense mucleic acids are useful for identifying proteins or screening for homologous nucleic acids required for proliferation to isolate candidate molecules for rational contraction and discovery programs, or for screening homologous nucleic acids are useful for proliferation in cells other than S. aureus, S. typhimurium, contraction formet directly from wire of activities or celled to a proliferation of no secuence of the printed specification, but was obtained in cell control formet directly from wire acquences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             rarcreacertresecentereredecristreacesecristrearcretriarisaris 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to an isolated nucleic acid comprising any one of the 6213 antisense sequences given in the specification where expression of the mucleic acid inhibits proliferation of a cell. Also included are: (1) a vector comprising a promoter operably linked to the nucleic acid condaining the vector; (3) an isolated condained appropriate whose expression is inhibited by the antisense nucleic acid; (4) an antibody capable of specifically binding the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular proliferation or the activity of a gene in an operon required for proliferation or the activity of a gene in an operon required for proliferation, or that inhibits cellular proliferation; (7) identifying a compound that influences the activity of the group a gene product or that has an activity against a biological pathway or required for proliferation, or that inhibits cellular proliferation or the biological pathway in which a proliferation-required gene or cis gene product lies of pathway in which a proliferation-required gene crompound that inhibits product is overexpressed or underexpressed; (12) determining the extent or organism actor, (9) manufacturing an antibiotic; (10) profiling compounds activity; (11) a culture comprising strains in which the gene compound that inhibits the compound's activity; (11) a culture comprising strains in which activity; (12) a culture comprising strains in which activity; (13) activitient of a compound that inhibits the compound's activity; (11) a culture comprising strains in which activity of a compound that inhibits the compound so consideration of an organism. The antisense moleic acids are useful for identifying proteins or screening for homologous nucleic acids required for proliferation in cells other than $S$ aureus, $S$ typhimurium, $C$ prokaryotic essential genes. Note: The sequence acids one of the trinted specification, but was obtained in electronic format directly from MIPO at $C$ the printed proliferation and proper sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New antisense nucleic acids, useful for identifying proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational drug discovery programs.
                                                                                                                                                                                                                                                                                                                                                                                                                                         Zyskind JW;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to antisense inhibitors of genes essential to prokaryotic cellular proliferation, their use in identifying the genes, their use in the discovery of movel antibiotics, the essential genes themselves and the encoded proteins. The prokaryotes used are Escherichia coli, Staphylococcus aureus, Salmonella typhi, Klebsiella pneumoniae, Pseudomonas ascruginose and Enterococcus faccalis. The invention is also useful for the identification of potential new targets for antibiotic development. The antisense nucleic acids can also be used to identify antibodies capable of binding to the express these proteins. The proteins can be used to screen compounds in rational drug discovery programmes. The used to screen compounds in rational drug discovery programmes. The used to screen compounds in rational proteins. The proteins can be used to screen compounds in rational proliferation in a wide variety of organisms. The present sequence encodes an essential prokaryotic collular proliferation protein. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at the way obtained in the way obtained in the way obtained in the way obtained in the control of the printed sequences.

ö

The invention relates to antisense inhibitors of genes essential to prokaryotic cellular proliferation, their use in identifying the genes, their use in the discovery of novel antibiotics, the essential genes the messlves and the encoded proteins. The prokaryotes used are Escherichia coli, Staphylococcus aureus, Salmonella typhi, Klebsiella pneumoniae, pseudomonas ascruginosa and Enterococcus faccalis. The invention is also useful for the identification of porential new targets for antibiotic development. The antisense nucleic acids can also be used to identify proteins used in proliferation, to express these proteins. The proteins can be used to screen compounds in rational drug discovery programmes. The proteins can be used to screen compounds in rational drug discovery programmes. The proteins can be used to screen compounds in rational drug discovery programmes. The proteins cold sequence is also useful to screen for homologous nucleic acids which are required for cell proliferation in a wide variety of organisms. The present sequence encodes an essential prokaryotic cellular proliferation protein. Note: The sequence data for this patent did not form part of the printed aspecification, but was obtained in 3 Antisense; ds; prokaryotic cellular proliferation gene; antibiotic; antibacterial; drug design. Carr ð Trawick JD, New polynucleotides for the identification and development antibiotics, comprise sequences of antisense nucleic acids. coli DNA for cellular proliferation protein #16 ď, Wall Claim 27; SEQ ID NO 5931; 511pp; English. ftp.wipo.int/pub/published\_pct\_sequences Zyskind JW, 2000US-0191078P. 2000US-0206848P. 2000US-0207727P. 2000US-0242578P. 2000US-0253625P. 2000US-0257931P. 2001US-0269308P.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention describes a purified or isolated nucleic acid sequence (I) consisting essentially of one of the 93 nucleotide sequences given in AAH81294, where expression of the mucleic acid in a microorganism is capable of inhibiting proliferation of a microorganism.

(I) have antibacterial and antibiotic activities, and can be used in gene therapy. Expression of (I) in a microorganism inhibite proliferation of the activity or level of a gene product required for proliferation of the activity or level of a gene product required for proliferation of a microorganism, and the manufactured antibiotic is useful for reducing the activity or level of a gene product required for proliferation of a microorganism in a subject, specifically humans. The nucleic acids that inhibit bacterial growth or proliferation con be used as antisense therapeutics for killing bacteria. In addition to therapeutic applications, the nucleic acid sequences complementary to sequences complementary to proliferation-required sequences that are specific for particular species of microorganisms can be used as conclained acid probes complementary to proliferation-required sequences that are specific for particular species of microorganisms can be used as probes to identify particular microorganism species in clinical cospeciments AAH81295 to AAH81481 of encode the Escherichia coli proteins coligonal coligonal coligonal coligonal coligonal coligonal coligonal coligonal coligonal coligonal coligonal coligonal coligonal coligonal coligonal coligonal coligonal coligonal coligonal coligonal coligonal coligonal coligonal coligonal coligonal coligonal coligonal coligonal coligonal coligonal coligonal coligonal coligonal coligonal coligonal coligonal coligonal coligonal coligonal coligonal coligonal coligonal coligonal coligonal coligonal coligonal coligonal coligonal coligonal coligonal coligonal coligonal coligonal coligonal coligonal coligonal coligonal coligonal coligonal coligonal coligonal coligonal coligonal coligonal coligonal coligonal c

The invention relates to an isolated nucleic acid comprising any one of the 6213 antisense sequences given in the specification where expression of the mucleic acid inhibite proliferation of a cell. Also included are:

(1) a vector comprising a promoter operably linked to the nucleic acid encoding a polypeptide whose expression is inhibited by the antisense nucleic acid; (2) an bose cell containing the vector; (3) an isolated polypeptide; (5) producing the polypeptide; (5) inhibiting cellular proliferation or the activity of a gene in an operon required for proliferation or the activity of a gene in an operon required for proliferation or that has an activity against a biological pathway required for proliferation, or that that inhibits cellular proliferation; (8) inhibiting cellular proliferation, (9) identifying a gene required for cellular proliferation or the biological pathway required for proliferation, or that inhibits cellular proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profilling a conspound sactivity, (11) a culture comprising strains in which the gene product is overexpressed or underexpressed; (12) determining the extent or which each of the strains is an entity of a compound that inhibits the collection of strains; or (13) identifying the target of a compound that inhibits the collection of strains; or (13) identifying the target of a compound that inhibits the collection of strains; or (13) identifying the target of a compound that inhibits the collection of strains; or (13) identifying the target of a compound that inhibits the collection of strains; or cellular proliferation in calls other than S. aureus, S. typhimurium, C. drug discovery programs, or for screening homologous nucleic acids required for proliferation in calls other than S. aureus, S. typhimurium, C. form part of the printed specification, but was obtained in the printed of the printed specification, but was obtained in the parageneral of the printed specification of the printed specification of the pr
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New antisense nucleic acids, useful for identifying proteins or scre
for homologous nucleic acids required for cellular proliferation to
isolate candidate molecules for rational drug discovery programs.
                                            Antisense; ds; prokaryotic essential gene; cell proliferation;
                                                                                                                                                                                                                                                                                                                                                                                                                                                             Haselbeck R,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to an isolated nucleic acid comprising any one of the 6213 antisense sequences given in the specification where expression of the mucleic acid inhibite proliferation of a cell. Also included are:

(1) a vector comprising a promoter operably linked to the nucleic acid encoding a polypeptide whose expression is inhibited by the antisense nucleic acid; (2) a host cell containing the vector; (3) an isolated polypeptide or its fragment whose expression is inhibited by the antisense nucleic acid; (4) an antibody capable of specifically binding the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular proliferation or the activity of a gene in an operon required for proliferation or that has an activity against a biological pathway proliferation or that has an activity against a biological pathway required for proliferation, or that thibits cellular proliferation; (8) identifying a gene required for cellular proliferation or the biological contains a gene activity; (11) a culture comprising strains or the biological contains acts; (9) manufacturing an antibiotic; (10) profiling a compound's activity; (11) a culture comprising strains in which the gene product is overexpressed or underexpressed; (12) determining the extent compound sactivity; (11) a culture comprising strains in which the gene product is overexpressed or underexpressed; (12) determining the extent or which each of the strains is present in a culture or collection of strains; or (13) identifying the target of a compound that inhibits the proliferation of an organism. The antisense mucleic acids are useful for for cellular proliferation in cells other than S. aureus, S. typhimurium, K. pneumonlae or P. aeruginosa. The present sequence data for this patient did core proliferation in cells other than S. aureus, S. typhimurium, content of the printed specification, but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New antisense nucleic acids, useful for identifying proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational drug discovery programs.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Zyskind JW;
